Hi Laurie-

Would you mind looking at something for Treasure Island? The Navy presented an overview of their plans for a data gaps work plan for a former fire training area that is right near the bay. They screen only against human health values but they have dioxins right against the bay. It seems like the Navy often neglects to address possible eco or bay impacts and I'm not sure about whether this is appropriate based on the contaminants that are present. I'll attach the dioxins figure FYI. I'm out next week and we haven't gotten the work plan yet - more just checking to see if this is something you could help with in general. Sonce used to help me but she is no longer available. Thanks.

~Christine
